## Projects

### Payvault - Card Tokenization System

- Tokenization System for sensitive information including credit cards, file and plain text in a SECURE and PCI DSS compliant digital environment.
- Define product architecture and lead them using the Scrum methodology for following up on key tasks.
- Worked on the development of RESTful APIs for integration with many Rakuten Services using Java1.8, Spring Boot, MyBatis.
- Worked on the development of Card capture and card update batch service using Apache camel routing framework for easy access of files located on AWS S3.
- Worked on the development of Card Information search tool used by registered services to redeem card number and vice versa.
- Provided technical expertise and updates in code reviews and application design discussions.
- Worked on various Performance Testing and Optimizations.

### C2C Service - Rakuma (RAKUten fleaMarket) now FriL

- Rakuma is a C2C flea-market based service that enables services to buy and sell items just like in a real fleamarket.
- The application also allows direct communication between the seller and the buyer, making it easy to negotiate the price.
- Proceeds from the sale are transferred to the designated bank account as quickly as the same day on the buyer confirms receipt of the product.
- Worked on the development of RESTful APIs using JAX RS Jersey Framework.
- Replaced Mroonga Search Engine for product search with Apache SOLR Search Engine there by enormously increasing product search response time.
- Worked on the various internal scripts for monitoring and measuring KPI's using Shell and Perl Scripting language.
- Worked on automating many of the internal reports.
- Worked on various Performance Testing and Optimizations.

## Personal Projects

### URL Shortening Service - <https://weeurls.com>

- Designed, developed and owns the complete project.
- Client & Server are completely decoupled.
- Front end is developed using React Js and is deployed on Apache Web server, secured and serves requests over https.
- Backend is developed using Spring Boot, Spring JPA with hibernate and is deployed on embedded Apache tomcat server provided by spring boot
- Database used is Mysql
